Hiring Manager

Unison Group

Dear Hiring Manager,

I am writing to express my keen interest in the AI Architect position at Unison Group. With my extensive background in software architecture, particularly in designing and implementing agentic AI systems, I am confident I possess the skills and experience to significantly contribute to your team's success.

My career has been focused on building scalable and efficient solutions, with a recent emphasis on leveraging LangGraph, Model Context Protocol (MCP), and multi-agent orchestration frameworks. At Dell.com, I spearheaded the adoption of microservices design principles and implemented event-driven architectures using Confluent Kafka, resulting in a 30% reduction in operational costs. My experience at Microsoft involved architecting and implementing DevOps principles to accelerate code delivery, and leading UI modernization initiatives to improve customer engagement. I am particularly drawn to Unison Group's focus on enterprise-scale agentic AI frameworks and the design of robust RAG pipelines. My experience in designing reusable patterns for agentic AI systems, defining agent communication protocols, and architecting long-term memory layers using vector databases aligns perfectly with the responsibilities outlined in the job description. I am eager to apply my expertise in optimizing cost and performance, implementing semantic caching, and ensuring data governance and responsible AI practices within your organization.

Thank you for considering my application. I am excited about the opportunity to discuss how my skills and experience can benefit Unison Group. I look forward to hearing from you soon to schedule an interview.

Sincerely,

Arijit Bhattacharya
